- <https://github.com/Mpacct>

As a former school psychologist I have skills in data interpretation, evaluation design, and team leadership. I'm well versed in the ability to work in a team environment. I have strengths with collaboration in order to complete larger tasks, as this was essential to my previous role. I'm an excellent problem solver and have the ability to think of challenges from different directions and perspectives. I have good interpersonal communication skills, and am able to convey my thoughts and ideas efficiently. I'm also able to adhere to strict time deadlines. I'm looking to transition into a developer position, based on my new field of study, and am ready to transfer and expand my current skill set to a new field that I am passionate to grow into.
